2.Introduction to project

Introduction To Project:-

The project development is not an easy job. Every aspect of the 'software design' project should be well analyzed and data should be in a very structured manner. Duplicity of the data should be avoided, to the point and descriptive fields should be taken. I have put my best efforts to computerize the process of Academic System and other relevant details for ready reference to the best of my information about this. It is a very comprehensive and complicated job, which involves many persons; whatever I have analyzed is detailed portion of record entries. The main outcome is shown through the help of different reports.

Various reports that are made in the project are:-

- List of tours package
- List of destination spot
